Re: Migration to Dynamic Registration Verification for gTLD: .bank and .insurance for RSEP ID: [#879030]

On 11 December 2017, fTLD Registry Services LLC submitted a Registry Service Evaluation Process (RSEP) request to migrate from a Static Registration Verification process to a Dynamic Registration Verification process for the .bank and .insurance TLDs.

ICANN conducted a review of the Registry's request and has determined the request does not raise significant Security, Stability or competition issues as defined in the RSEP Policy (<https://www.icann.org/resources/pages/registries/rsep/policy-en>). ICANN further determined that implementation of the proposed service does not require a material change to the Registry Agreement. The registry operator is free to deploy the service as proposed in the referenced RSEP request.

Sincerely,
